Australian Designed and Manufactured for the Weighing Industry.

ASVL 25kg Valve Bag Batching System

The ASVL bagging system is designed primarily for filling valve type bags. The system uses a gate system to dispense the product into the weigh hopper. While in non critical weighing cycle the valve bag is also being filled but once the weigh cycle becomes critical the dispencing stops to allow for higher accuracy.

- The ASVL has a simple operator interface for both inputting data and to explain where the stage of the process.
- Fully stainless construction on all components that touch the product to prevent contamination.
- The system is manufactured in Australia by Associated Scale Services Pty Ltd

- **Capacity 25kg (can be designed around other capacities)**
- **Material**
  - **Stainless Steel for items that touch product**
  - **Mild Steel for all other. (can be completely stainless steel)**
- **Load Cells**
  - **Custom design specifically for this operation**
- **Power**
  - **3 Phase 415VAC**
- **PLC controlled**
- **Bagging Speed 20-45seconds depending on required accuracy**
