

Belt Weighing Controllers

Through suppliers, GSE Scales, and EMC, Associated Scale Services are able to monitor weights and control feed rate via belt weighing systems.

Controls of secondary feeders for additives with respect to the primary feed rate is available.

- The GSE Scales 660 series will also allow for additive products to be supplied to the main belt product at a rate proportional to the main product flow.
- Warranty for the Belt Weighing Systems is 12 months from delivery.

Integration in either an Idler System or Load Celled Segmented Belt
Both the Idler and Load Celled Segmented Belt can be supplied as a complete system.

The systems are fully programmable to individual customer needs.
Alarm, system controls are fully specified prior to programming to ensure that the customer's requirements are what are supplied.

Actual belt weighing systems are also available through Associated Scale Services.

Mining Company requirements for safety inductions are strictly adhered too.
