← Designed similar to the PB3000 system where a weigh frame is separate from the sub frame via ball races. This ensures any side shocks are taken up through the frame not the load cell

A cross section of the PB3000 SYSTEM

Height and size is customizable with limits.

← SYSTEM DESIGNED FOR PITTED WEIGH FRAME OR RAMPED WEIGH FRAME. SYSTEM SHOWN WITH A RAMP

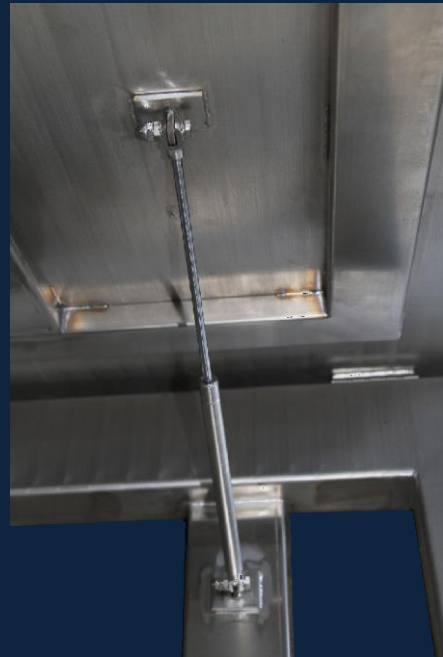

The **PB3000SP** platforms are designed around the floating deck arrangement to prevent any side loading damage. As this system has the load cells above the weigh system, water does not have the opportunity to cause damage from long term saturation.

The load cells also are also protected from high pressure cleaning.

Cleaning under the weigh plate is easily performed as the top plate is designed to be lifted and direct access under the plate is given. As there are no electronics under the plate, any amount of cleaning will not affect the scale.

Top Lifting Stainless Steel

Easy for cleaning
PL3000SP

Dual Range is offered if required by the customer otherwise single range systems are supplied

Specifications:

| | |
|------------------------|--|
| Base Construction | 304 STAINLESS STEEL Option - Galvanized <ul style="list-style-type: none"> Option – 316 Stainless Steel |
